2.3 COMMUNICATIONS PROTOCOL SETUP

VMS supports multiple REDSCAN 3060 devices which send a REC code (event code) over UDP to a single port of IP Server. However, it doesn't support multiple REDSCAN 3060 devices sending event codes to a single port on VMS over TCP.

NOTE - If only TCP will be used, configure individual ports for each REDSCAN device.

Open the **Redscan Manager**, with the **REDWALL Event Code** tab activated.

In the **Protocol** section, If both **UDP** and **TCP** are enabled, VMS will try to connect via TCP first; if it fails, it will automatically switch to UDP.
