

Buyer's Guide

Roof Top Protection

Outdoor and Indoor Solutions

Issued : March 2017
Release Note : V1.0

What's On The Roof?

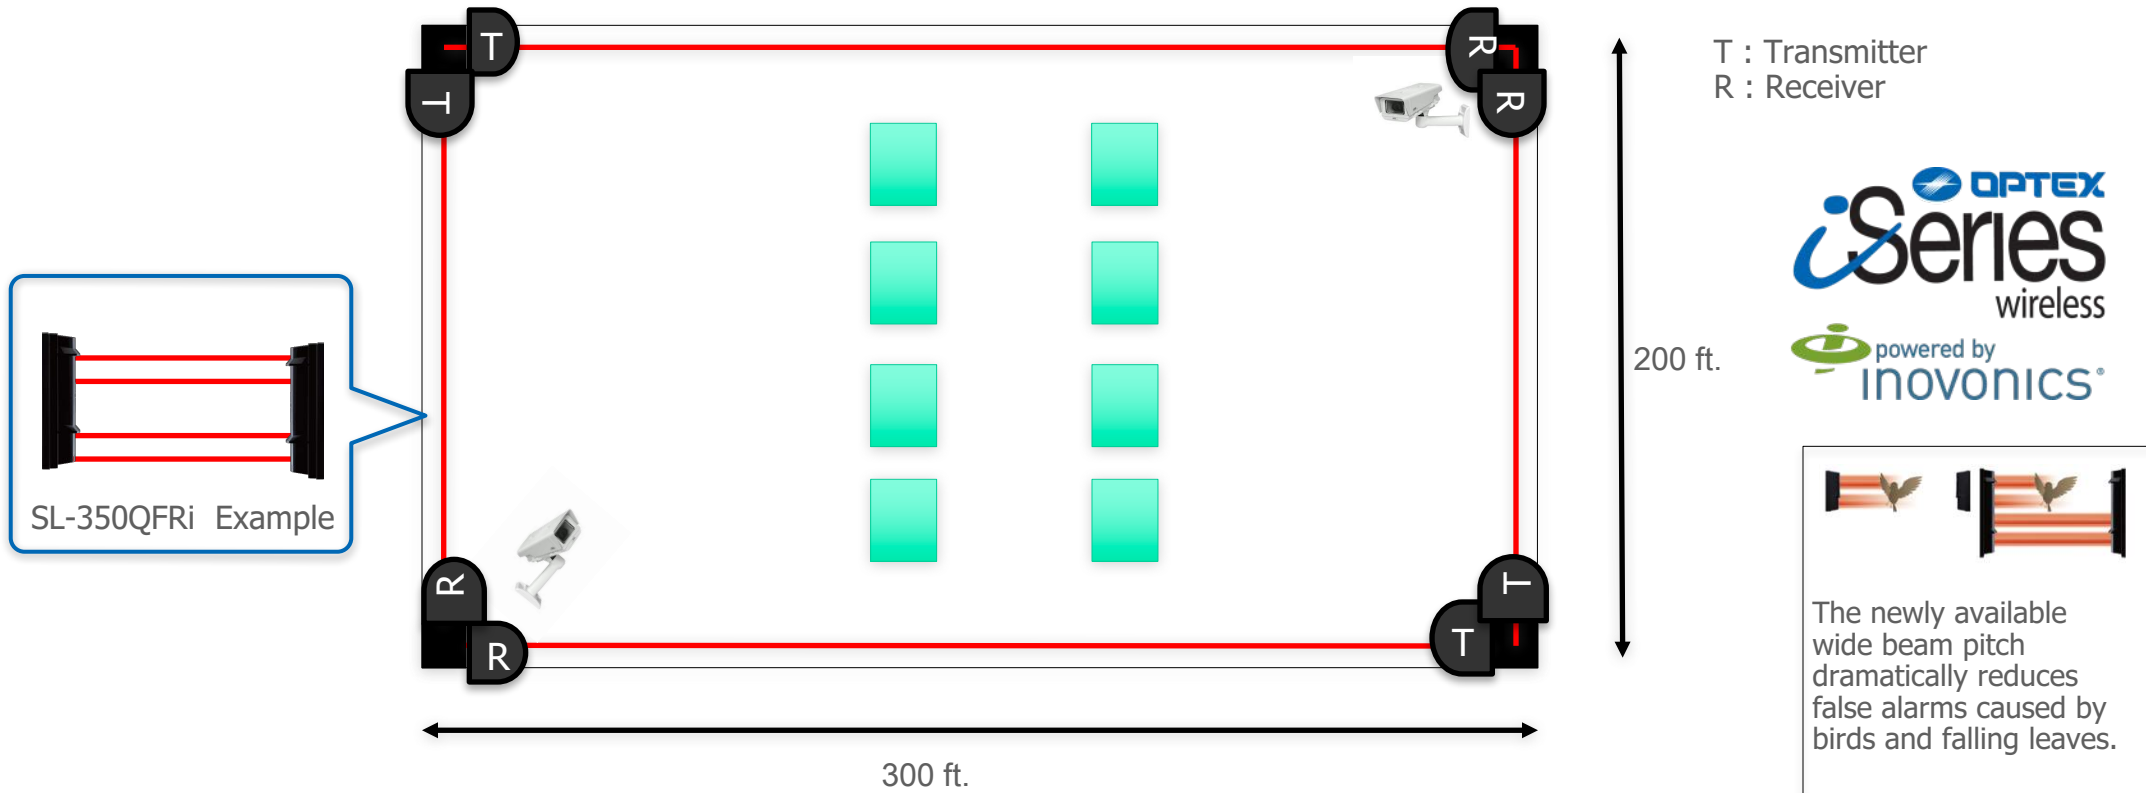

Stealing HVAC Is A Common Security Issue

Prevent Entry Through Skylights and Unauthorized Roof Access

Roof Top Site Plan: Wireless Photoelectric Beam Detector

- SL-350QFRi 350 ft. (Includes Inovonics EN1941 transmitter and batteries) Quad Beam Double stacking available
- AX-200TFRi 200 ft. (Includes Inovonics EN1941 transmitter and batteries) Twin Beam Double stacking available
- AX-100TFRi 100 ft. (Includes Inovonics EN1941 transmitter and batteries) Twin Beam Double stacking available
- No trenching and can be installed where power is not available
- Can easily be added on to support existing video or access systems
- 3.6 V 13.0Ah LSH20 Lithium battery power supply
- -4 to 140 degrees Operating temperature

Roof Top Site Plan (Small Roofs): Class 1 Laser Detector

Built-in On-board
Laser Analytics

65ft.

The RLS-2020 can detect a moving object's size, speed and distance, resulting in highly reliable detection while minimizing false alarms.

20m x 20m (65ft. x 65ft.), 90 degree
for horizontal detection area

- Base Model : RLS-2020S (12VDC, 6W Max PoE, IP66, -4 to 140°F)
- 4 alarm zone IP connection, 3 outputs N.O./N.C. selectable (master alarm, zone outputs, trouble, tamper)
- -40 to 140°F (no heater required)
- Can easily be added on to support existing video or access systems

Roof Top Site Plan (Large Roofs): Class 1 Laser Detector

Built-in On-board
Laser Analytics

The RLS-3060 can detect a moving object's size, speed and distance, resulting in highly reliable detection while minimizing false alarms.

■ Image of horizontal detection area

30m/100ft. radius, 190 degree
for horizontal detection area (H2 mode)

- Base Model : RLS-3060L (24 VAC/DC, IP66, -4 to 140°F)
4 alarm zone, Option PIE-1 (PoE plus)
- Advanced Model : RLS-3060SH (built-in heater: 24 VAC/DC, IP66, -40 to 140°F)
8 alarm zone, Additional intelligent feature,
Option PIE-1 (PoE plus for the unit and a built-in heater)
- Can easily be added on to support existing video or access systems

Indoor Roof Top Site: Class 1 Laser Detector

Skylight at Public facility/Warehouse

Ceiling at Data Center

Airport

Built-in On-board
Laser Analytics

The RLS-2020 can detect a moving object's size, speed and distance, resulting in highly reliable detection while minimizing false alarms.

20m x 20m (65ft. x 65ft.), 90 degree
for horizontal detection area

- Base Model : RLS-2020i (12VDC, 6W Max PoE, IP66, -4 to 140°F)
4 alarm zone IP connection, 3 outputs N.O./N.C. selectable (master alarm, zone outputs, trouble, tamper)
-40 to 140°F (no heater required)
- Can easily be added on to support existing video or access systems

Indoor Small Object Throwing Detection- Class 1 Laser Detector

Preventing small object thrown to cat walk in data center

Preventing small object thrown at international airport

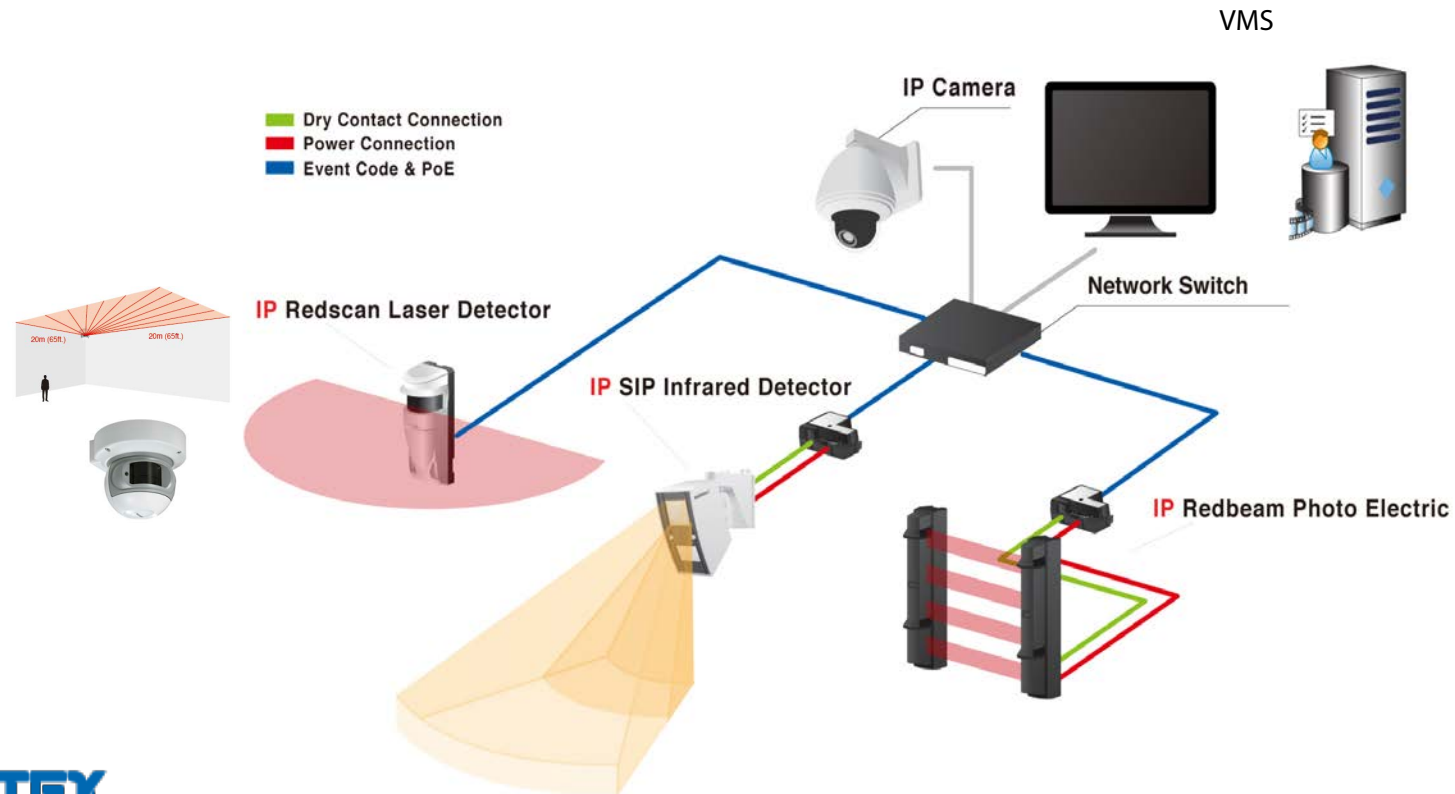

- Base Model : RLS-2020S (12VDC, 6W Max PoE, IP66, -4 to 140°F)
4 alarm zone IP connection, 3 outputs N.O./N.C. selectable (master alarm, zone outputs, trouble, tamper)
-40 to 140°F (no heater required)
- Indoor object throwing mode selection with 0.25 degrees resolution. Sensitivity response time is 25 msec

IP Integration Benefits For Perimeter Detectors

POE Options

- PIE-1 powers Redscan detector with PoE+
- Use PIE-1 with SIP and Redbeam for PoE and for Redwall Event Command IP encoding back to the network.

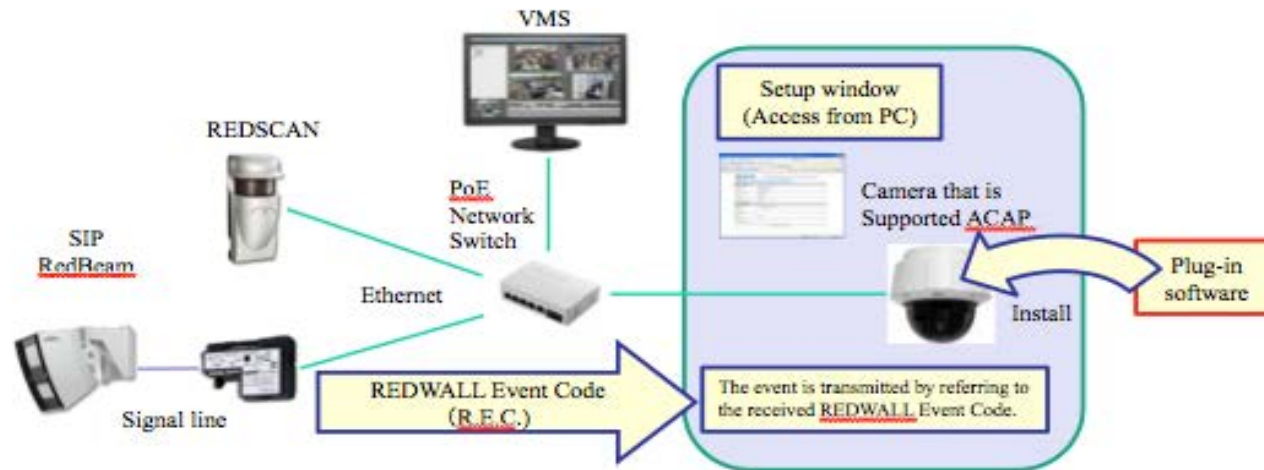

AXIS Camera Integration (ACAP)

The OPTEX ACAP (AXIS Camera Application Platform) plug-in module allows OPTEX's IP based detection sensors to send commands directly to an Axis PTZ. The main feature makes it easy for a camera to actively move and zoom based on alarm outputs from the sensor. Other commands are supported, like triggering the camera to record, or trip output contacts that turn on lights, alarms, or send alerts.

Faster Event Response

ACAP plugin provides direct integration to Axis PTZ cameras. Instead of relying on a (supported) VMS to merge sensor and camera movements, the sensor is able to directly communicate with the PTZ. This can simplify the integration challenge of getting three separate entities all working together, to a single integrated communication.

RLS-3060 Long Range Laser Detector

Indoor and Outdoor, Wired or IP

[HORIZONTAL DETECTION ZONE]

[VERTICAL DETECTION ZONE]

Redscan Detection Principle RLS-3060

Time of Flight (TOF) method

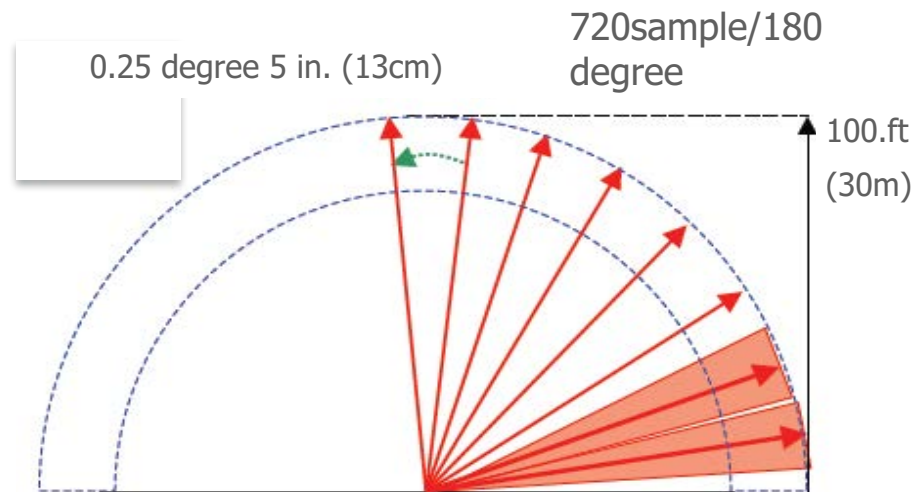

By calculating the time during which a emitted beam returns after hitting an object, the distance to the object can be measured.

Sensing resolution = 0.25 degree

At 100ft. (30m) distance, detection width is only 5 inch. (13cm).

Redscan is sampling every 0.25 degree. It means that Redscan protects 180 degree area with 720 beams and 190 degree area with 760 beams.

Scanning speed is 20 rotations per second.

Built-in On-board Laser Analytics

Detection patterns

Redscan, RLS-3060 can be installed vertically, horizontally or at an angle. Therefore, a horizontal or vertical or inclined detection area can be achieved:

Detection range:

30m (100ft.) radius, 180 degree for vertical detection area (V mode)

30m (100ft.) radius, 190 degree for horizontal detection area (H2 mode)

■ Image of vertical detection area

V mode

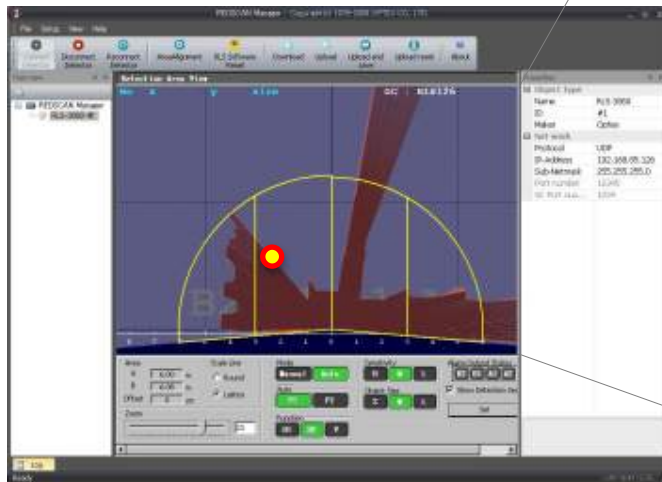

■ Image of horizontal detection area

H2 mode

Detection Patterns

4 Zones

8 Zones

RLS-3060SH Only

Built-in On-board Laser Analytics

REDFSCAN Base Model (RLS-3060)

Standard model with advanced intrusion detection

Features

- ◇ Detection range is 100ft. (30m) radius, max. 190 degree
- ◇ Selectable horizontal & vertical detection area
- ◇ Recognition of intrusion locations and activates
4 independent outputs for PTZ control
- ◇ Flexible and easy Set-up for detection area
- ◇ Analog (dry-contact) & IP connection

REDFSCAN Advanced Model(RLS-3060SH)

High end model with intelligent detection analysis

Additional features

- ◇ Intelligent detection analysis for various type of applications
such as PTZ camera control, human hands detection,
direction control, vehicle detection etc.
- ◇ Built-in heater (-40 + 60 C degree, -40 + 140 F degree)
- ◇ Selectable zone patterns for PTZ camera control on IP
connection

Application Example- Horizontal Detection

Auto mode P1 (Auto learning)

By using this feature, the unit can trace the shape of the site and set the detection area automatically.

(The detection range is within the area which is set by the rotary switch and fine adjustment potentiometer.)

Horizontal detection area

Accessories

- Adjustable angle bracket for RLS-3060 for mounting on wall or pole
 - **RLS-SB**
- Pole Mounting Bracket for RLS-3060
 - **RLS-PB**
- Laser Area Checker, to confirm the laser area
 - **LAC-1 (included in RLS-AT)**
- Snow or Rain cover for RLS-3060
 - **RLS- ENCL-V**
- Conversion adapter for M16 to 1/2"NPT
 - **RLS- AM1612BR**

RLS-2020 Short Range Laser Detector

Indoor and Outdoor, Wired or IP

Detection Area

Redscan mini, RLS-2020 series can be installed vertically, horizontally or at an angle.

A horizontal, vertical or inclined detection area can be achieved.

Detection range

20m x 20m (65 ft. x 65ft.), 95 degrees

Vertical detection area

Horizontal detection area

Models

RLS-2020I

Indoor use only

- 20m x20m (65ft x 65ft) 95 degree detection area
 - Vertical and Horizontal detection areas
- Multi-angle Adjustment Shell Structure (MASS)
 - Automatic area setting function (no need to measure the field of view)
 - Advanced area setting (1 pattern)
- 4 adjustable detection areas on IP connection
 - Total 3 outputs can be assigned for analog connection
- Anti-rotation, Anti-masking, Tamper (Selectable)
 - Compatible with Power over Ethernet
 - Paintable housing

RLS-2020S

Indoor and Outdoor

- In addition to the features of the RLS-2020I,
- Indoor and outdoor use
 - Indoor high resolution mode
 - Indoor throw-in mode
 - Advanced area setting (4 pattern)
 - Area selection
 - Environmental disqualification circuit
 - Anti-rotation, Anti-masking, Soiling, Trouble, Tamper, DQ output (Selectable)

Accessories

- Pole Mounting Bracket for RLS-series
 - **RLS-PB**
- Redscan Adjustment tool set
 - **RLS-AT** (including 1 unit of Laser Area Checker, **LAC-1** and **Redscan Manager software**)
- Redscan Laser Area checker
 - **LAC-1**
- Recess mount Bracket
 - **RLS-RB**
- Redscan mini Laser window
 - **RLS-LW**

Accessories

2020WMA: 304 mm (12 inch) Wall Mount Bracket

2020WMA8: 203 mm (8 inch) Wall Mount Bracket

2020PDMA: Pendant Mount

2020CMB: Corner Mount

2020PLMK: Pole Mount Kit

Adjustable Arm
965 mm to 1.6 m
(38 – 62 inches)

2020ANGX

610 mm
(24 inches)

2020ANGS

Indoor Adjustable Angle Mount long/short

Photoelectric Detectors

Wireless

Detection Principle

A photoelectric detector consists of an infrared (IR) light source that generates a pulsed IR beam, and an IR receiver that detects the beam.

The transmitter and receiver are installed on opposite sides of the area to be monitored. The receiver detects when the pulsed beam is physically interrupted by an intruder, and generate alarms.

Features For Reliable Line Detection

- Used mainly for Perimeter applications
- Utilizes a transmitter side and receiver side
- Transmitter transmits invisible infrared light to the receiver
- When the light beam interrupted, an alarm is triggered
- 70ft. To 650ft. Detection ranges available
- Battery-Powered and hardwired options available
- 4 Channels allow for stacking and long run applications
- Environmental Disqualification output will send a trouble signal when beam strength reaches below adverse weather levels for 20 seconds due to rain, snow, or heavy fog.
- 99% beam blocking stability

How do iSeries Detectors Work?

Each iSeries detector comes with Inovonics transmitter pre-installed and includes batteries

Inovonics EN1941 Transmitter

- Wireless transmitter is pre-installed by OPTEX techs.
- Monitors alarm, low battery, tamper, DQ circuit
- 2000ft. Line of sight transmission range

EN5040T Repeater ACC650 WP Enclosure

If the job site is large or line of site to receiver is obstructed, a repeater is recommended.

EN4232MR Receiver EN4216MR Receiver EN7290 Vista Receiver

Inovonics add-on receivers use Form C relays to allow connection to any hardwired panel or stand-alone wireless application.

Any Control Panel

Any PC Application

iSeries Wireless Photoelectric Products

AX-100TFRi / AX-200TFRi

- 100ft. And 200ft. Photobeam Models
- Battery-powered, wireless
- Powered by Inovonics wireless (Included)
- Batteries Included

SL-350QFRi (Battery-Powered)

- 350ft. Photobeam Models
- Battery-powered, wireless
- Powered by Inovonics wireless (Included)
- Batteries Included

AX-TW Series

Beam Mounting Enclosures

- Enclosures for above beam models
- Custom built with beams to job specs
- AX-TW50 – 20"., Double Sided
- AX-TW100 – 3ft. 3in., Double Sided
- AX-TW200 – 6ft. 6in., Double Sided (TW100M / TW200M are Single Sided)

Options

Anti Bird Cap ABC-4

Keep birds and small animals off the detector to reduce false alarms. Stop rain and snow streaming in front of the detector to keep the sensitivity.

Back Cover BC-4

Conceal the back side of pole mounted detector.

Pole Side Cover PSC-4

Conceal the gap between two pole mounted detectors in back to back.

Conduit Bracket CBR-4

Heating unit HU-3

Conceal the gap between two pole mounted detectors in back to back.

- **Power input**
24VAC/DC
- **Current draw**
210mA(max.) (Per 1 unit)
- **Thermo switch**
60°C (140°F)

Thank You.
